

TURBOSOUND Edit

Version 1.0 (15 June 2015)

TURBOSOUND Edit 1.0 is an editing software specifically created for all amplified TURBOSOUND loudspeakers featuring powerful DSP processing and USB remote control. The application allows the user to manage the comprehensive capabilities of TURBOSOUND iQ, NuQ, Athens and Siena Series powered loudspeakers, with all mod cons on your Windows PC / laptop.

The app provides USB remote control for all settings of the connected loudspeaker, as well as off-line editing for system preparation, when the loudspeaker is unavailable. It is possible to edit one system at a time, or to work in off-line mode. Real-time meters are displayed for the input, pre (IN) and post (OUT) processing signal levels.

System Requirements

- Speaker firmware V1.7 or higher required (check www.turbosound.com for updates)
- The app can be started once per PC and connects to only one speaker at a time
- Compatible to Windows XP, Windows Vista, Windows 7 or Windows 8 operating system software

Features

- Support for all TURBOSOUND iQ, NuQ-AN, ATHENS (TCS-AN) and SIENA (TSP-AN) products with USB interface
- On- and off-line preset editing
- Real time input, output and ULTRANET level metering
- Control input source, gain and output peak limiter
- Intuitive graphic representation of positioning and presets. Also sound modelling (iQ Series only)
- Delay alignments up to 300 ms, adjustable in ms, metre or feet
- Position and mounting presets per loudspeaker type
- Select from predefined sound mode presets (Live / Speech / Playback)
- 4-band user EQ with graphic, classic and numeric control
- Select cross-over presets that have been optimised for TURBOSOUND loudspeakers, or adjust frequency and phase manually
- Use the integrated FBQ feedback destroyer process for automatic, fixed or dynamic feedback suppression during the show
- Store, manage and share your preferred TURBOSOUND loudspeaker settings on your PC
